

# Nikhil Sinha

DevOps Engineer

Bengaluru, Karnataka

nikhilsinha198@gmail.com | Portfolio | LinkedIn | GitHub | X

**DevOps Engineer** with 2+ years of experience on **AWS and OCI: 28 servers** (5 prod, 3 UAT, 20 dev), **15 containerized services**, and a **14-day vulnerability-remediation cycle** closed to client confirmation. Hands-on with Linux/RHEL, Docker, Nginx, Trivy, GitHub Actions and Bash/Python automation.

## TECHNICAL SKILLS

- **Cloud & Infrastructure:** AWS (EC2, VPC, Security Groups, IAM, S3, RDS, ALB, Route 53), Oracle Cloud Infrastructure (OCI Compute), Linux/RHEL, Nginx
- **Containers & Release:** Docker, Docker Compose, Private Docker Registry, Git, GitHub Actions, CI/CD
- **Security & Automation:** Trivy, Vulnerability Remediation (VA), Patch Management, Bash, Python, Cron
- **IaC (self-directed labs)** Kubernetes, Terraform
- **Development:** Node.js, React, JavaScript, TypeScript, REST APIs, MongoDB, Golang

## EXPERIENCE

### DevOps Engineer

OneZippy.ai

Feb 2024 – Apr 2026

Bengaluru, Karnataka

- **Owned vulnerability remediation** for 15 containerized services: rebuilt and redeployed **~40 patched images per 14-day cycle** against client scan reports of up to **~450 findings**; client confirmed all container high/critical VA points closed.
- **Deployed releases across 28 servers** (5 prod, 3 UAT, 20 dev) using a private Docker registry, SSH and Docker Compose; completed the full 5-server production rollout in **one working day (~8 hrs)** per cycle and sent completion confirmation to client stakeholders.
- Ran **Trivy** image scans before each deployment to verify fixes ahead of the client's re-scan.
- **Operated Linux/RHEL servers on AWS EC2 and OCI Compute:** configured Docker, Nginx (reverse proxy, SSL, load balancing) and runtime dependencies on client-provided instances; troubleshooted via logs, resource usage, networking and port checks.
- Wrote **cron-scheduled Bash/Python scripts** for server health checks and container reddeploys on slow or unresponsive servers; extended the approach to dev/UAT database containers.
- **Contributed to recovery** of an OCI Compute instance that crashed after UAT and production workloads together exhausted RAM, CPU and disk: service restored in **~1 hour**; supported moving UAT and production onto dedicated servers to remove resource contention.
- **Executed client-directed removal** of the MongoDB database service from a production server and migrated its non-PII calculation data to an internal server, coordinating with the CTO.
- Built a **6-stage GitHub Actions CI/CD pipeline** from scratch for a prospective client's Node.js/React project (code, build, test, security scan, deploy, monitor), with ~2–3 min end-to-end runs; also edited existing workflows.
- Delivered within **client data-residency and access-control requirements** on client-controlled, region-specific infrastructure.
- Served as **technical point of contact** for a client project: joined client meetings, demoed progress, captured requirements and turned them into engineering tasks for the team, while building across frontend, backend and infrastructure.

## EDUCATION

### Master's in Computer Application (MCA)

Jain University

2021 – 2024

Bengaluru, Karnataka

### Bachelor's in Computer Application (BCA)

Punjab Technical University

2018 – 2021

Kapurthala, Punjab
